***Allowable Subject Matter***

Pending Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance:

The closest prior arts are JP 11-010416 in view of Uemura et al (US 4,761,234).

JP teaches the apparatus as recited in claim 1 with plurality of modules having polyamide skin layer over porous support. However, JP does not teach the skin layer as having bromine atoms. Uemura teaches modules having polyamide skin layer with bromine atoms. However, the bromine atoms in the Uemura modules are residuals from the polyacyl bromide used for making the skin layer. Applicants' claim 1 recites bromine atoms which are incorporated into the skin layer after formation of the skin layer 'by treating the polyamide skin layer with a free chlorine aqueous solution containing a bromine compound', and therefore, is expected to be attached to the skin layer differently than the bromine atoms in Uemura. It would also be not obvious to one of ordinary skill in the art to arrive at the claimed structure of the skin layer from the combination of the references because Uemura ref has bromine only as a precursor for making the skin layer, it is not intended to be retained in the skin layer, and there is no suggestion in the references to retain bromine in the skin layer for any reason. All other claims depend from claim 1, and therefore, are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
